DISSOLUTION VIRUS TYPE-7

DSV-7 / Melanocytic Regression Syndrome (MRS)

■ CLASSIFIED — LEVEL 4 · DISTRIBUTION RESTRICTED ■

DOC REF	GSA-BTA-2052-DSV7-039	CLEARANCE	LEVEL 4 / RESTRICTED
DATE	14 MARCH 2052	REVISION	REV. 7.3

01 / EXECUTIVE SUMMARY

DSV-7 is an engineered ssRNA pathogen confirmed across 34 nations since March 2048. It exploits MC1R-linked pigmentation pathways — melanocyte dysfunction, keratinocyte collapse, progressive dermal failure. **Higher eumelanin density reduces progression. Mechanism: confirmed but unexplained. No treatment synthesized. All independent research prohibited.**

■ **PRIORITY ALPHA** Profile confirmed. Whereabouts: OMEGA RED. A cure — if it exists — would emerge from one individual. Alpha Squad standing order: locate contain.

02 / STRUCTURAL PROFILE — TEM

03 / TRANSMISSION & SUSCEPTIBILITY

PHENOTYPE	RISK	SUSCEPTIBILITY
Fitzpatrick I-II	EXTREME	95%
Fitzpatrick III-IV	HIGH	72%
Fitzpatrick V	MODERATE	31%
Fitzpatrick VI	LOW	8%

CLASSIFIED
LEVEL 4 / RESTRICTED

04 / CLINICAL PROGRESSION

STAGE	WINDOW	PRESENTATION	PROGNOSIS
I — Initiation	Day 3–14	Black fracture-pattern on extremities. Photosensitivity.	Treatable — window narrow
II — Progression	Wk 2–8	Patterns spread. Dermal rigidity. Melanocyte apoptosis.	Poor without intervention
III — Dissolution	Wk 8+	Systemic organ involvement. Neural inflammation.	Terminal without cure
IV — Terminal	Variable	Multi-organ failure. 94% mortality — untreated Fitzpatrick I–II.	FATAL

05 / CRITICAL UNKNOWNNS

★ PRIORITY ALPHA	MELANIN PROTECTION MECHANISM Protective pathway empirically confirmed. Biochemically unexplained. If replicable: cure is viable. Research: classified.
★ PRIORITY ALPHA	ENGINEERED ORIGIN Non-natural sequence homology detected. Artificial origin under classified investigation.
★ PRIORITY BETA	CURE CANDIDATE — LOCATION UNKNOWN One profile confirmed. Field units assigned. Details classified at level below.

[REDACTED — LEVEL 5 CLEARANCE · OMEGA RED]

06 / SECTOR ACCESS
